Hit and Hold Specifications

Hit and Hold is a method for driving valves that can be used to reduce power consumption and heat generation while maintaining valve performance specifications. The valve is "hit" with the full rated voltage for some time period to open it (T1 in the graph) and then "held" open with substantially reduced voltage until the desired pulse length is reached (T2 in the graph). The following table shows the possible holding voltages and power consumption for our standard 12 and 24 VDC solenoids.

Rated Voltage (VDC)	2-way		3-way	
	Hold Voltage	Hold Power	Hold Voltage	Hold Power
24	8 VDC	0.46 watts	12 VDC	1.04 watts
12	5 VDC	0.44 watts	6 VDC	0.63 watts

Typical Flow Diagram

Oligonucleotide Synthesis Application

- Efficient design provides flow close to what is typically expected in a 16 mm valve in a 12 mm wide package.
- Compact 12 mm size saves space and manifold costs
- Low internal volume and high performance is ideal for applications requiring low carryover compared to the industry leading 16 mm valve

LQX12 Miniature Diaphragm Isolation Valve

Recommended LQX Valve Mounting

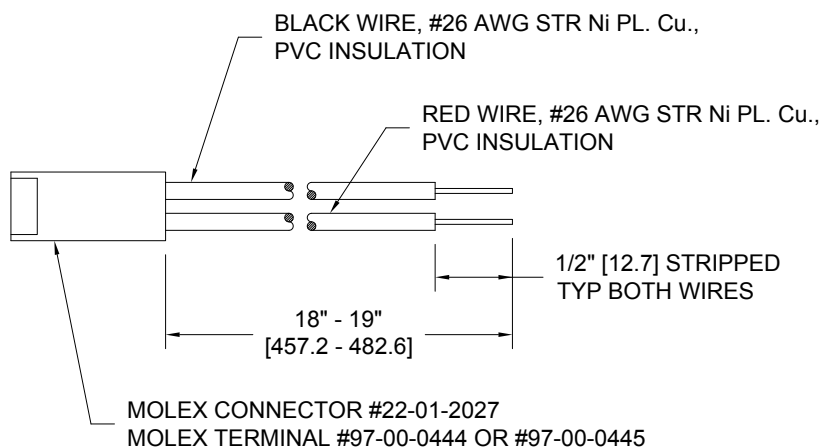

Valves mount on 12 mm centers with four 2 mm screws (No.2) to a maximum torque of 0.11N-m (15 in-oz).
